

Exporting a video from Garageband

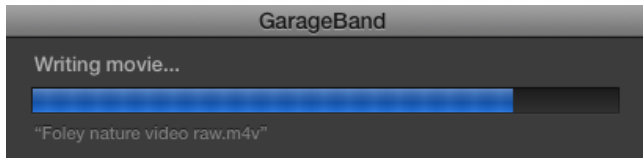

-From top menus choose:
File>Movie>Export Audio to Movie

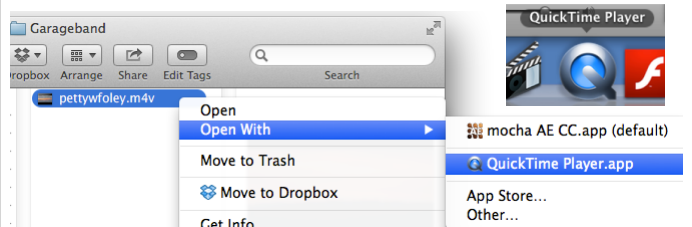

-Location and name of new movie.....window will pop up
-Name the project as instructed and save in your Garageband folder
-At bottom of window choose Preset: SD 480p
-Click Save

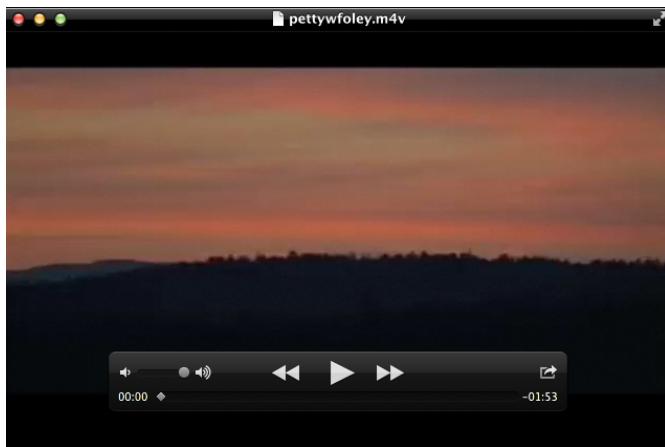

-Writing movie bar will pop up to show file is exporting as an m4v video file

-Open Finder window and locate the exported movie file.
-Right click on the file to open in Quicktime player

-The exported movie is a .m4v video file
-Watch the video in it's entirety to make sure it is error free before submitting.

-After checking to make sure the video exported correctly, zip the video file
-To zip the file, right click on the file in the Finder window
-Select Compress from the pop up window
-Submit the .zip file in the drop box
